

Tools, catalogues and standards

ProtectUK publication date

23/11/2021

NPSA publishes a range of tools, catalogues and standards to help evaluate and select measures that will effectively address actual needs.

When thinking about physical security measures there is a temptation to go straight to market and find products which claim to address perceived security issues.

A methodical process of assessing risks and determining requirements for security measures should be followed. NPSA has developed guidance for the development of both high level and detailed security requirements.

For more information, please visit the [NPSA website](#).
